

V251

FULL TIE-ROD DISMANTLING JOINTS

Product Description

V251 Full Tie-Rod Dismantling Joints are the crucial elements for the installation and dismantling of valves and other fittings on the pipelines. The self-restrained function enables tight sealing and stays fixed on the lines with prolonged times. Without a dismantling joint offering longitudinal adjustment, it is almost impossible to insert a valve exactly into a pipe section. V251 dismantling joint with full-length threaded tie-rods ensures complete restraint and a leak-free operation.

Thanks to this adjustability of the dismantling joint, the valve can be fitted next to the dismantling joint, and the dismantling joint can be set to the exact length required prior to being securely connected to flanges.

Technical Data

Size range	DN50 - DN2400
Pressure range	PN 10 -16 - 25 - 40
Temperature	-10°C to +110 °C
Connection	EN 1092-2 ISO 7005-2 - Flanged
Coating	Powder Epoxy
Testing	EN 12266-1
Marking	EN 19

Application Range

- Potable water applications
- Water treatment and distribution systems
- Mining industry
- Shipbuilding and drilling facilities
- Food and chemical enterprises
- Oil and gas processes

Related Products

- V151 Gate Valve
- V106 Double Eccentric Butterfly Valve
- V202 Tilting Check Valve

Product Features

- The heavy model V251 is equipped with 3 flanges, is the perfect solution for all standard and non-standard applications.
- Larger sizes and higher pressure ratings up to 40 bar are always possible depending on customer requirements.
- Only high-quality EPDM or NBR qualities for water, drinking water and sewage are used for the gasket. These guarantee a clean seal for years and at the same time the movement of the dismantling joint.
- It is easy to install and remove thanks to the standard longitudinal adjustability of ± 25 mm and thus offers perfect support during the installation and removal of valves.
- High-quality FBE coatings protect TVN dismantling joints from long term corrosion.
- Ductile iron GGG-40/50 body galvanized 8.8 bolts, nuts and washers.
- The bolts, nuts and washers can be chosen as AISI 304 or AISI 316 stainless steel.
- Certain types of dismantling joints are also suitable for use without restraint in flexible pipelines
- The ductile iron body has high resistance to the high tension stress which can occur at the pipelines.
- Connection flanges to any standard are available upon customer request.
- Larger nominal sizes, higher pressure ratings and non-standard build lengths are also available on request.
- Hydrostatic test pressure for shell: $PN \times 1.5$ according to EN 12266-1.

Material List

No	Part	Material
1	Nut	8.8 Galvanized Steel / AISI 304-316 Stainless Steel
2	Llong Flange	GGG40/50 Ductile Iron
3	Nut	8.8 Galvanized Steel / AISI 304-316 Stainless Steel
4	Compression Flange	GGG40/50 Ductile Iron
5	Sealing Gasket	EPDM / NBR
6	Bolts	8.8 Galvanized Steel / AISI 304-316 Stainless Steel
7	Short Flange	GGG40/50 Ductile Irons
8	Nut & Washer	8.8 Galvanized Steel / AISI 304-316 Stainless Steel
